TYPE HP PRESSURE BLOWERS

Size 29012
Arrangement 8
Type HP Pressure Blower
with venturi inlet and guard, shaft and bearing guard,
coupling guard and motor.

Size 32014
Arrangement 1
Type HP Pressure Blower
with venturi inlet.

DESIGN FEATURES

- Pressures to 128"WG.
- Capacities to 20,000 CFM.
- Stable performance . . . the pressure curve remains stable from wide-open to closed-off . . . fan instability, or pulsation, is eliminated even when "turn-down" approaches zero flow.
- Variable wheel diameters and a choice of seven outlet sizes enable efficient fan selection across a wide range of volumes and pressures.
- Efficiency . . . advanced wheel and aerodynamic housing design combine for air-handling efficiency superior to conventional radial-wheel designs.
- Choice of arrangements . . . direct-drive and belt-drive.

CONSTRUCTION FEATURES

- Wheel construction: available as standard in either welded, high-strength steel alloy or riveted, high-strength aluminum alloy. Also available in welded Alloy 2205 stainless steel.
- All-welded steel housings . . . heavy-gauge housings are designed to prevent "flexing" at high pressures.
- Taper-lock hub or Interference shaft-to-hub fit for concentric wheel-to-shaft mounting.
- Flanges . . . continuously welded flanges match ANSI Class 125/150 hole pattern.
- Bearings . . . utilize adapter-mount concentric locking collars for optimum shaft-to-bearing fit to ensure long bearing life and reduced vibration.
- Balance . . . all wheels are precision-balanced prior to assembly . . . fans with motors and drives mounted by nyb are final-balanced at the specified running speed.
- Shafting . . . straightened to close tolerance to minimize "run-out" and ensure smooth operation.
- Inlet configuration . . . a choice of three inlet types allows units to be tailored to specific application requirements.
- Lifting eyes . . . standard on all units for ease of handling and installation.
- Industrial finish . . . medium-green enamel.

ELECTRONIC CATALOG

Fan-selection program corrects for altitude, temperature, rarefaction, and generates performance curves. Also includes complete product literature, guide specifications, installation and maintenance literature, and Engineering Letters.

DESIGN ADVANTAGES

WHEEL OPTIONS

STEEL

Blades, frontplate, and backplate are constructed of high-strength 950X/960X alloy for Sizes 270–320, and 980X alloy for Sizes 330–380. All-welded construction with cast-iron hub bolted to the backplate. Taper-bore bushing is used to secure wheel to shaft on Sizes 270–350, and interference wheel-to-shaft fit is standard on Sizes 360–380.

ALUMINUM

Blades, frontplate, and backplate are constructed of high-strength 6061-T6 aluminum alloy with aluminum hub. Wheel blades are riveted to frontplate and backplate. Taper-bore bushing is used to secure wheel to shaft.

ALLOY 2205

Constructed of high-strength, austenitic-ferritic stainless steel containing 40-50% ferrite in an annealed condition. The high chromium, molybdenum, and nitrogen content provides corrosion-resistance superior to 316L or 317L stainless in most environments [ASTM A240/ASME SA-240]. Wheels utilize all-welded construction with 316L stainless-steel hub bolted to the backplate and interference wheel-to-shaft fit.

APPLICATIONS

New York Blower's Type HP Pressure Blowers are designed for high-pressure, industrial-process applications. All applications can be handled in either induced-draft or forced-draft configurations. Numerous modifications and accessories make the Type HP Pressure Blower suitable for a wide range of systems.

Uses include:

- Combustion air
- Glass-blowing
- Injection-type conveyors
- Furnace blowers
- Cooling systems
- System exhaust
- Air knives
- Thermal oxidation
- Chemical process
- Moisture blow-off
- Drying applications
- Fluidizing systems

ARRANGEMENTS-TYPE HP PRESSURE BLOWERS

ARRANGEMENT 4

A compact direct-drive unit with a minimum number of moving parts for ease of maintenance. Wheel is mounted directly on motor shaft.

Maximum airstream temperature:

180°F.

ARRANGEMENT 1

Recommended for applications requiring a specific speed or future adjustment. Wheel is mounted on shaft which, in turn, is mounted in heavy-duty bearings.

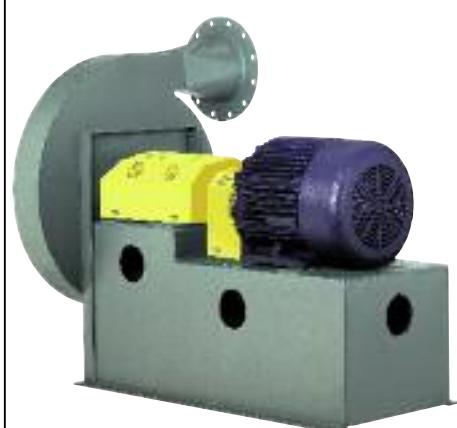

Maximum airstream temperature:

180°F.—aluminum wheel.

300°F.—steel wheel.

600°F.—with heat-fan construction.

ARRANGEMENT 8

Maximum airstream temperature:

180°F.—aluminum wheel.

300°F.—steel wheel.

600°F.—with heat-fan construction.

ACCESSORIES

Size 28012
Arrangement 4 Type HP
Pressure Blower, with
optional flanged inlet, inlet guard,
drain with plug, motor,
and cleanout door.

Size 29012 Arrangement 8 Type HP Pressure Blower,
with shaft and bearing guard, coupling, coupling guard,
and motor.

- **COMPANION FLANGES**

Designed to fit flush with fan inlet and outlet flanges, provided with a matching hole pattern.

- **DRAINS**

Tank flange is welded to the lowest point of the housing scroll . . . female pipe thread . . . includes plug.

- **INLET FILTER**

Filters use oil-wetted or dry element. High-efficiency filter is flange-mounted. Furnished standard with outboard support bracket and available with or without protective hood.

- **SILENCERS**

Available to match standard inlet or outlet flange sizes. Heavy-welded construction filled with high-density, acoustical absorption material. Flange connection is furnished for mounting to blower, and any of the three standard inlet connections are available for opposite end. Refer to Catalog Sheet CS-853, and separate Engineering Supplement for more details.

- **OUTLET DAMPERS**

Available as either an integral outlet design for fixed damper control or a separate wafer design for variable-flow applications. Wafer damper is available with optional actuator and positioner.

- **GASKETING**

Full-face gasketing is used between the inlet plate and housing side sheet as standard construction. Special gasketing is available to handle a wide range of applications.

- **COATINGS**

Cost-effective protective coatings under a variety of trade names are available to increase the fan's resistance to adverse, corrosive environments.

- **OTHER ACCESSORIES**

Also available from **nyb** are drive components such as motors, couplings, and v-belt drives. A variety of preventive-maintenance products including vibration detectors, bearing-temperature detectors, and zero-speed switches are also available.

SAFETY EQUIPMENT

Safety accessories are available from **nyb**, but selection of the appropriate devices is the responsibility of the system-designer who is familiar with the particular installation, or application, and can provide for guards for all exposed moving parts as well as protection from access to high-velocity airstreams. Neither **nyb** nor its sales representatives is in a position to make such a determination. Users and/or installers should read "Recommended Safety Practices for Air Moving Devices" as published by the Air Movement and Control Association, Arlington Heights, Illinois.

MODIFICATIONS

- **SHAFT SEALS**

Arrangement 1 and 8 fans come standard with shaft seals consisting of ceramic-felt elements compressed between metal bracing plate and retainer. Arrangement 4 fans utilize a single Teflon® element as standard construction. Optional lubricated lip seals [Buna, Viton® and Teflon] and gas-purgeable, double carbon ring shaft seals are also available.

[Teflon and Viton are registered trademarks of DuPont and DuPont Dow Elastomers, respectively.]

Gas-purgeable double carbon ring shaft seal.

- **ACCESS DOOR**

Gasketed, flush bolted door opens to provide access to wheel.

- **HEAT-FAN CONSTRUCTION**

Available on Arrangements 1 and 8 steel wheel Type HP Pressure Blowers up to 600°F. Modifications include high-temperature paint, shaft cooler, and shaft-cooler guard.

- **SPECIAL ALLOY CONSTRUCTION**

Airstream components can be constructed of a wide range of alternate alloys for corrosive applications.

- **CLADDING FOR SOUND ATTENUATION**

Consists of 2" acoustical mineral-wool insulation wrapped over the blower housing and covered with a welded steel jacket. To be most advantageous with blower acoustical cladding, all inlet and outlet ductwork should also be wrapped and acoustically cladded.

- **UNITARY BASE**

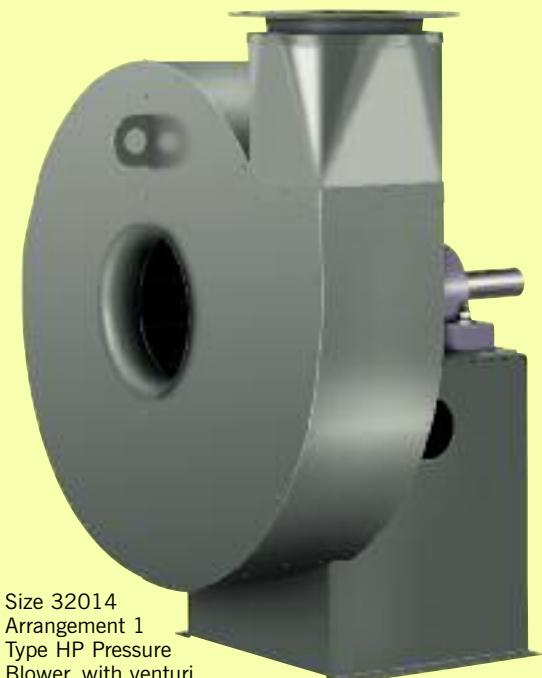

Arrangement 1 fan, motor, and guards can be mounted and shipped on a rugged, structural-steel base.

- **VIBRATION ISOLATION**

Rubber-in-shear or spring-type isolation mounted to rugged structural unitary base reduces the transmission of vibration to the mounting structure.

- **TECHNICAL SUPPORT**

nyb has developed numerous engineering and application support tools for system designers and operators. For further information, contact your local **nyb** representative or visit our web site at: <http://www.nyb.com>.

Size 32014
Arrangement 1
Type HP Pressure
Blower, with venturi
inlet and cladding.

LOW LEAKAGE CONSTRUCTION

Arrangements 1 and 8 Type HP Pressure Blowers are available in the following pre-engineered low leakage packages:

TYPE 2	TYPE 3	TYPE 4
Full-face gasketing. Double-element lip seal [Buna and Viton]. Soap-bubble test [housing only]. Continuous welding of all housing exterior seams.	Full-face gasketing. Double-element lip seal [Buna and Viton]. Soap-bubble test [fan assembly]. Continuous welding of all housing interior and exterior seams.	Full-face gasketing. Purgeable, double-element carbon ring shaft seal. Soap-bubble test [fan assembly]. Kerosene/chalk test. Continuous welding of all housing interior and exterior seams.

USING PERFORMANCE TABLES

The performance tables in this bulletin are designed to provide performance ranges for groups of wheel diameters with common outlet sizes, based on direct drive operation at 3550 RPM. Through interpolation, a specific fan size can be selected for a given operating point at standard operating conditions. For example, to achieve 4000 CFM at 65° SP, the proper fan selection would be either Size 28510A, or Size 29010S, depending on desired wheel type. For more specific and accurate fan selection, refer to the fan-selection program in the **nyb** Electronic Catalog.

MAXIMUM SAFE SPEED

Chart I details maximum safe speeds at 70°F. When alloy construction is specified or when temperatures are involved, multiply the appropriate wheel safe speed shown in Chart I by the factor shown in Chart II. The unit safe speed at temperature is the lesser of the unit safe speed at 70°F. [Chart I] and the wheel safe speed calculated at operating temperature and with the appropriate wheel material.

SIZING NOMENCLATURE

8-digit model number designates the wheel diameter, outlet size, wheel type, and nominal motor horsepower.

280	12	A	50
Wheel diameter	Outlet size [inches]	Wheel type A = aluminum S = steel/alloy	Nominal motor horsepower

Note: The last two digits showing motor horsepower are not required for

Arrangement 1 Type HP Pressure Blowers.

CHART I

MAXIMUM SAFE SPEEDS AT 70°F.†

Size	Outlet Size	Wheel	Structure	
			Arr. 4/8	Arr. 1
270 - 290	04, 06, 08, 10, 12	3600	3600	3600
300 - 320	06, 08, 10, 12, 14	3600	3600	3600
330 - 350	08, 10, 12, 14	3600	3600	3200*
360 - 380	10, 12, 14, 16	3600	3600	3200*

* 300 - 320 with 12 and 14 outlet and 330 - 380 with all outlet sizes are limited due to low bearing life at higher speeds.

† Maximum safe speeds apply only to wheels operated at or below the stated temperatures and free of material build-up, corrosion, or wear.

PERFORMANCE

Performance is based on actual cubic feet per minute [ACFM] at the blower inlet at standard density [.075 lbs./ft.³] and static pressure at the blower outlet. Static pressure capabilities are shown in inches water gauge [“WG].

Air density corrections are necessary for proper selection when air density varies from the standard .075 lbs./ft.³ at 70°F. at sea level. This also occurs when negative static pressure exists [rarefaction] on the inlet side of the fan. Multiply the required static pressure at conditions by the appropriate factors in Charts III, IV, and V to obtain corrected pressure for blower selection. Pressure and BHP will be reduced at conditions by the inverse of these factors. Multiply one factor by the other if temperature, altitude, and rarefaction are non-standard. For example: If the installation is located at an altitude of 4000 feet, the gas temperature is 300°F., and the inlet pressure is -40”WG, the correction factor is 1.84 [1.16 x 1.43 x 1.11].

ALUMINUM WHEEL PERFORMANCE AT 3550 RPM

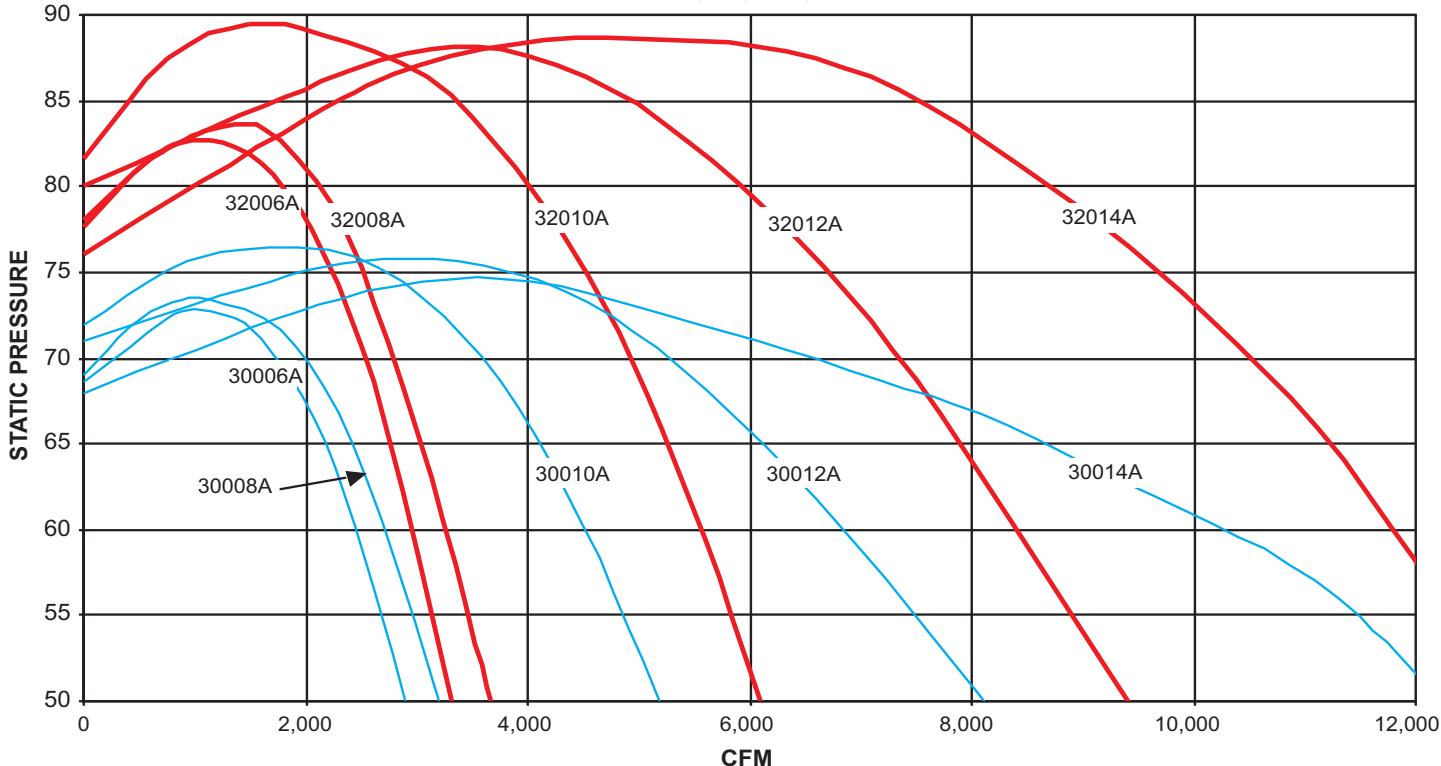

TYPE HP
PRESSURE
BLOWERS

The HP Pressure Blower product line offers multiple options for applications requiring relatively low flow at high static pressures. The performance curves shown on pages 7 through 10 indicate the range of operation at 3550 RPM for a variety of fan wheel diameters and outlet sizes. The blue lines are for the smallest wheels and the red lines are for the largest wheels in a given size range, for each outlet diameter. For specific points of operation and greater detail, refer to The New York Blower Company's Electronic Catalog. Refer to Chart I on page 6 for maximum safe wheel speeds.

HIGH-PRESSURE FAN OPTIONS FOR HIGHER AIRFLOW APPLICATIONS
Refer to separate bulletin on each product line.

AF FANS
High-efficiency, airfoil wheel designed for clean-air applications. Capacities to 240,000 CFM [6800 CMM], static pressures to 50" [12.4 kPa].

RTS FANS
High-efficiency, radial-tip wheel suitable for particulate-laden airstreams. Capacities to 220,000 CFM [6200 CMM], static pressures to 30" [7.5 kPa].

HPBC FANS
High-efficiency, backward-curved wheel capable of handling light particulate-laden or moist airstreams. Capacities to 170,000 CFM [4815 CMM], static pressures to 40" [9.9 kPa].

DIMENSIONS

Not to be used for construction unless certified. Arrangement 1, 4, and 8 bare fan weight does not include wheel or motor. For wheel weights, see page 11. Weights in pounds.

s For Arrangement 4 fan sizes 330-380, and motor frames above 326TS, the A dimension listed above applies for all discharges except BH. For BH fans with larger motor frames, the A dimensions are: 364TS-365TS - 39¹/₄ ; 404TS-405TS - 40¹/₄ ; 444TS-449TS - 39¹/₈ .

DIMENSIONS

Not to be used for construction unless certified. Arrangement 1, 4, and 8 bare fan weight does not include wheel or motor. For wheel weights, see page 11. Weights in pounds.

FAN DISCHARGES – VIEWED FROM DRIVE SIDE

Clockwise – angular discharges at 45°

Housings are non-reversible and non-rotatable. Discharges available in 22½°. Contact nyb for Down Blast discharge.

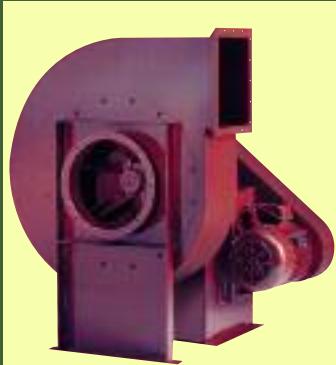

Counterclockwise – angular discharges at 45°

The New York Blower Company has a policy of continuous product development and reserves the right to change designs and specifications without notice.

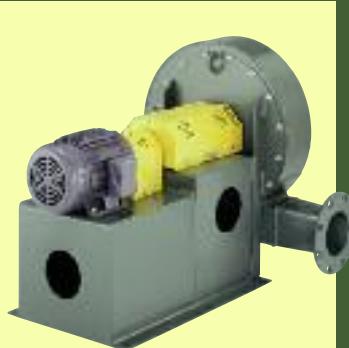

COMPLETE SELECTION OF AIR-MOVING EQUIPMENT

The New York Blower Company offers thousands of different types, models, and sizes of air-moving equipment. Contact your nyb representative for assistance in finding the best fan for your application.

DUST/MATERIAL HANDLING

Wide range of duty available with unique fan lines capable of handling light dust to heavy material. Typical applications include dust-collection and high-pressure process along with material-conveying.

AIR-HANDLING [CENTRIFUGAL]

Designed for clean to moderately dirty gas streams. Commercial and industrial HVAC, process cooling, light material-conveying, heat removal, and dryer exhaust are just a few of the numerous sample applications

AIR-HANDLING [AXIAL]

For the ideal handling of clean to moderately dirty airstreams. Commercial and industrial HVAC, drying and cooling systems, fume extraction, and process-heat removal are typical applications.

FIBERGLASS REINFORCED PLASTIC [FRP]

Choice of performance and duty for corrosive gas streams. Applications include chemical process, wastewater treatment, laboratory hood exhaust, and tank aeration.

CUSTOM PRODUCTS

Designed for unique applications. Variety of configurations, temperatures, flows, and pressures. Wide range of modifications and accessories are available to meet the most demanding specifications.

Leading the industry forward since 1889

ROOF VENTILATORS

Including both hooded and upblast ventilators, propeller fans, and centrifugal roof exhausters. These units are ideal for industrial, commercial, and institutional applications.

HEATING PRODUCTS

Industrial-duty steam unit heaters with steam heating coils are available for facility heating and process-heat transfer.

PROCESS/FAN COMPONENTS

Plug fans, plenum fans, wheels, inlet cones, and housings for a wide variety of OEM applications. Process/fan components are used in air-handling units, ovens, dryers, freezer tunnels, and filtration systems.
